

Big Down, Big Up

Big Down, Big Up: Big Confusion, so TR Most Likely

Big Down, Big Up so Big Confusion and TR likely

Wait for 2nd entry like Micro DB or micro DT

Reversal up usually reaches
at least 1 tick above sell climax

Gap down, Sell Climax, then reversal up
Any reversal, big or small, is more likely
to lead to TR than opposite trend

Big Down, Big Up: Closed Near Open and Was Doji Day

Reversal Up: Opening Reversal, Not Reversal Day

When reversal up comes after small selloff,
can get big bull trend day
and not just a rally to the top of the bear swing

This is not a reversal day because
initial selloff was too small
and therefore there was not much to reverse
