

Buy The Close Rally

BTC: Only if Strong BO and Not Still in TR

Strong BO above bear channel so BTC

BTC, even though not yet above all of bars to left

Strong BO of DB HL MTR

BTC, but better to B using stop above bull bar closing near its H

Strong rally, but in TR

6 consecutive bull bars, but just below prior H
Still in TR so do not BTC... do opposite!

Buy Low, Sell High, Scalp

TR so bears will Sell bull closes near top

Bulls will buy strong bear closes near bottom

Buy The Close (BTC) Bull Trend BTC: What's Needed

Buy The Close Bull Trend, want:

3 – 5 bar bull BO with either 2 very big bull bars
or 3 – 5 smaller bull bars

Most bars closing near high

BO Bar has close above prior highs
so possible measuring gap

Follow-through bar has bull body
(at least not bear body)

BO bar closed above
prior high so gap

If already in strong bull trend,
look for another BTC rally

Want **Surprise Bar**

Big bull bar closing on high and
above high of prior bar (gap up)

Expect resumption of bull trend

Higher probability if wait to
buy strong follow-through bar

Follow-through bar did not have bear body
Better if bull body, like here
Best if big bull body

B The C: Bulls Usually Can Avoid Loss

Extremely big bull bar so **Surprise Bar**
Odds favor at least 2 more legs up to wedge top
Even though only 1 bar, ok to B the close

When reasonable B the C, bulls usually can avoid loss
Usually get micro DT that let's them out breakeven
If immediate selloff, usually gets back to the H C
Can B more and then
exit breakeven on 1st B and with profit on lower B

BTC: After Big Tail, TR Likely Within 3 Bars

Buy The Close BO

After 2 big bull bars or
3 – 5 small bull bars,
bulls Buy The Close of bull bars

Easier and better for
most traders to
B using stop above
bull bar closing near its H

After 5 bars in BTC, if bear bar or big tail,
usually becomes TR within 3 bars

Buy The Close: Bad Buy Signal Bar

Sometimes trends have bad High 1 or High 2 buy signal bars

In very strong trends, when PB, B above any bar, including bear bar

In ordinary trends, like here, higher probability
to buy above bull bar closing near its high

Alternatively, buy above the
top of the most recent leg up

Alternatively, buy above the
top of the most recent leg up

I cropped out
remainder of day

Bear bars so lower probability High 1 B signal bars
